## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of claims 1-5 in the reply filed on 3/18/05 is acknowledged. The traversal is on the ground(s) that the different groups of inventions as presented do not provide burden on the examiner. This is not found persuasive because different search and evaluation for each of the different groups put a burden on the examiner. See 37 CFR 1.141.

The requirement is still deemed proper and is therefore made FINAL. Claims 6, 7, 10, 13-21 withdrawn from further examination as being non-elected inventions.

### ***Claim Rejections - 35 USC § 102***

Claims 1 is rejected under 35 U.S.C. 102(e) as anticipated by US patent #6,754,701 (Kessner).

- As for claim 1: Kessner teaches an improvement of network browser application, wherein the browser has built-in capabilities to perform analysis and testing of websites residing on the Internet (3:37 – 4:34).

### ***Claim Rejections - 35 USC § 103***

Claims 2-5 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over US patent #6,754,701 (Kessner) in view of US patent #6,418,544 (Nesbitt).

- As for claim 2: Kessner teaches a test-enabled web browser, comprising:

standard browsing components (i.e., the browser, 4:22-23);

a load testing components that operate to test a website server in accordance with a load (3:38-43; 4:11-21);

a graphical user interface to provide user access to the standard browsing components and the load testing components (3:62-65; 4:11-21);

wherein when the load testing component is activated, a number of multiple copies of the browser on a single client machine (4:22-34), with each of the copies of the browser separately executing a playback script (3:46-65; 7:63-8:15); and

wherein the load applied to the website server by the number of multiple copies of the test-enabled browser is dependent on the number (1:41-55). It is inherently included in Kessner that the cache is turned off since Kessner is silent regarding the using of stored documents in the cache. Even if it is not, implementation of load testing with cache turn off is well known in the art as disclosed by Nesbitt et al (2:7-3:43). One of skill in the art would be motivated to load testing with cache turn off to achieve realistic result as suggested by Nesbitt.

- As for claim 3: The test-enabled browser comprises at least one of a script record component and a script playback component (3:46-65; 7:63-8:15).
- As for claims 4, 5: It is inherently included in Kessner's teaching of WinInet that the standard browsing components comprises DLL components pertain to WinInet (7:12-20; 9:37). Evidence support for the inherency reasoning can be found, at least, in US patent #6,601,020, 27:35-51).

***Response to Arguments***

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
